ELEVATE

BUILDING A REPUTATION BY BUILDING FOR TOMORROW.

Elevate Commercial Building Products:

LEED v5 Credit Guide

Elevate™ Commercial Building Products – Leading on LEED®

For more than 45 years, Elevate has delivered commercial roofing and building-envelope solutions built on quality, durability, and innovation. Long before "green building" became standard practice, Elevate systems were already helping reduce energy use and improve building performance around the world.

Today, Elevate is part of the Amrize family of brands, playing a pivotal role in a foundation-to-rooftop portfolio of building-envelope solutions that support LEED® goals. Together, these systems help project teams advance energy efficiency, resilience, carbon reduction, and long-term building value.

The Leadership in Energy and Environmental Design (LEED®) green building program — created and administered by the U.S. Green Building Council (USGBC) — is the global benchmark for sustainable design, construction, and operations. LEED v5, the program's next major rating-system update, raises expectations for:

- **Real-world, measured performance**
- **Energy and water efficiency**
- **Material transparency and embodied carbon**
- **Climate resilience, health, and quality of life**
- **Ecological conservation and site stewardship**

Elevate is ready. Our portfolio — including **Asphalt, ISOGARD™ polyiso insulation, reflective UltraPly™ TPO, MAX PVC, EcoWhite™ EPDM, vegetative roofing, and airtight building-enclosure systems** — aligns with LEED v5 priorities and can support credits across multiple categories.

As LEED evolves, Elevate's commitment to technical expertise, product transparency, and proven system performance remains constant. Use this guide to explore how Elevate solutions help design smarter, more resilient, and more sustainable buildings.

Elevate - Nobody Covers You Better™

Understanding LEED® v5 — What's New and Why It Matters?

LEED v5 replaces LEED v4 (in place since 2016). USGBC has announced that registration for LEED v4 and v4.1 will sunset on June 30, 2026. LEED v5 represents a major shift from documentation-driven compliance to verified performance, organized around three core impact goals:

- **Climate Action**
- **Quality of Life**
- **Ecological Conservation and Restoration**

Key changes include:

- **Mandatory carbon modeling and assessment** for both operational and embodied carbon
- **Stronger material requirements,** including reduced global warming potential (GWP) and toxicity, and increased transparency
- **Climate resilience and human impact assessments** as prerequisites in project planning
- **Continuous indoor air quality (IAQ) monitoring** and new human-centric health and comfort strategies
- **A restructured scoring framework,** shifting from prescriptive modeling to long-term, verified outcomes

For the **building envelope**, LEED v5 moves from a "check-the-box" documentation approach to a performance-based model that requires project teams to actively evaluate and improve the roof and enclosure's contribution to both operational and embodied carbon.

LEED v5 introduces more rigorous and measurable requirements, including mandatory carbon modeling, stricter material and toxicity standards, climate-resilience assessments, continuous indoor air quality (IAQ) monitoring, and expanded focus on biodiversity and site stewardship. The rating system is fully restructured to emphasize long-term, verified impact.

A major change for the building envelope is the move from **documentation to performance.** LEED v5 now requires embodied-carbon assessments for major components — including roofing — and mandates enhanced enclosure commissioning aligned with updated ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers) standards. Project teams must measure, disclose, and reduce embodied carbon, with greater attention to thermal performance, passive strategies, and ongoing operational outcomes.

Key Changes for Roofing & Building Envelope:

Embodied Carbon (Mandatory)

- **LEED v4:** Encouraged the use of Environmental Product Declarations (EPDs) and other documentation, but did not require embodied-carbon reduction targets for building components.

- **LEED v5:** Requires a mandatory assessment of embodied carbon for major building components including the roof and building envelope to drive reductions in upfront carbon emissions.

Performance-Based Modeling

- **LEED v4:** Focused more on prescriptive compliance paths and documentation for many credits.

- **LEED v5:** Requires projects to use whole-building life-cycle assessment (wBCLA) or more detailed A1–A3 assessments to analyze and reduce embodied carbon, with a stronger emphasis on real-world performance outcomes.

Building Enclosure Commissioning (BECx)

- **LEED v4:** Building enclosure commissioning was an optional strategy under the Enhanced Commissioning credit.

- **LEED v5:** BECx becomes a prerequisite, requiring compliance with updated ASHRAE standards (such as 90.1-2019 and 90.1-2022), which include mandatory language for building enclosure commissioning.

Material Transparency & Real Performance

- **LEED v4:** EPD documentation contributed to Materials and Resources credits but did not require demonstrated performance improvements.

- **LEED v5:** Moves beyond documentation by requiring teams to measure, disclose, and reduce embodied carbon, using better-performing materials with lower GWP, reduced toxic exposure, and higher recycled content within their EPDs.

Energy & Envelope Integration

- **LEED v5:** Reinforces the role of the building envelope as a central strategy for decarbonization, encouraging:

  - High-performance façades and roof systems
  - Careful attention to thermal bridging and peak thermal loads
  - Integration with all-electric HVAC and passive design strategies
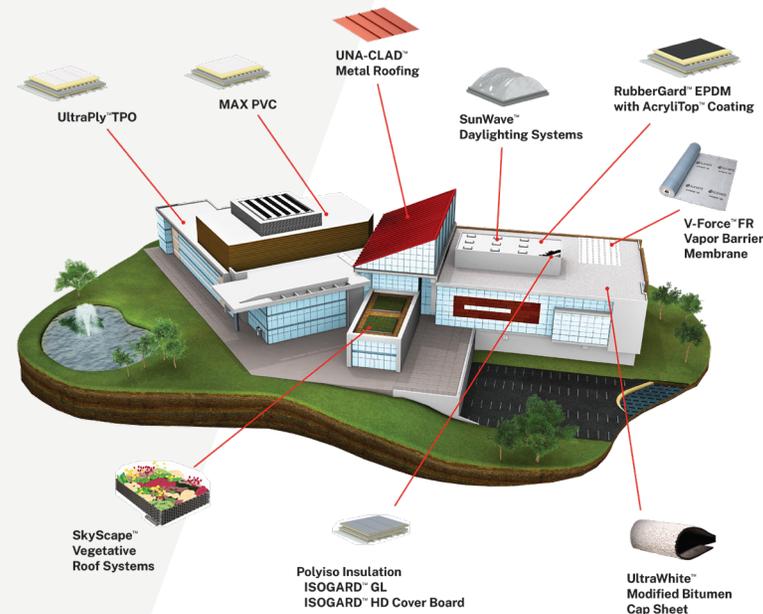

For owners, designers, and consultants, these changes make the roof and building envelope more critical than ever. Elevate's solutions provide the performance data, technical support, and durable systems needed to help meet LEED v5 expectations.

Innovative Products for Sustainable Buildings

Elevate Commercial Building Products provides sustainable solutions for the full spectrum of building requirements — from a single new roof to a fully integrated, site-wide strategy supporting LEED objectives.

- High R Value, energy-saving insulation: ISOGARD™ polyiso
- Reflective, cool-roof membranes: UltraPly™ TPO, MAX PVC, EcoWhite™ EPDM
- Durable, resilient waterproofing and flashing systems
- Vegetative roofing assemblies that support stormwater management and habitat
- Airtight envelope systems that enhance energy performance and indoor environmental quality

These solutions can help project teams address LEED v5 categories such as Energy and Atmosphere (EA), Materials and Resources (MR), Indoor Environmental Quality (EQ), Sustainable Sites (SS), and Integrative Process (IP).

UltraPly™ TPO

MAX PVC

UNA-CLAD™ Metal Roofing

SunWave™ Daylighting Systems

RubberGard™ EPDM with AcryliTop™ Coating

V-Force™ FR Vapor Barrier Membrane

SkyScape™ Vegetative Roof Systems

Polyiso Insulation ISOGARD™ GL ISOGARD™ HD Cover Board

UltraWhite™ Modified Bitumen Cap Sheet

CASE STUDY:

Amrize Manufacturing & Distribution Center

Salt Lake City, UT

Amrize's LEED-Certified Manufacturing & Distribution Center in Salt Lake City, UT spans approximately 650,000 square feet, more than doubling the size of the previous facility. The facility's roof system features:

- Elevate UltraPly™ TPO roofing membrane
- ISOGARD™ polyiso insulation
- SunWave™ skylights

Together, these components deliver:

- Exceptional energy efficiency
- High thermal performance and long-term durability
- Optimized daylighting performance that supports both energy reduction and occupant comfort

This project has received significant recognition, including the 2024 Architectural Products Product Innovation Award (PIA) in the "Projects Applications" category. The award highlights how Amrize and Elevate combine sustainable design practices with advanced building solutions to deliver high-performing, innovative, and LEED-aligned roofing systems.

This facility demonstrates how Elevate products and Amrize's broader portfolio work together to support LEED certification and long-term performance objectives.

OVERVIEW OF LEED® V5 CATEGORIES:

Integrative Process, Planning, and Assessments (IP)

The **Integrative Process, Planning, and Assessments (IP)** credit category focuses on early analysis and planning to support high-performance, cost-effective, and cross-functional project outcomes.

- LEED v5 introduces new prerequisites that emphasize climate resilience, social equity, and long-term carbon emissions. Elevate and Amrize can support integrative design by providing envelope performance data, modeling inputs, and system options that help inform holistic decisions across energy, carbon, and durability.

Key Prerequisites & Credits:

- **(REQ) – Carbon Assessment:**
  To understand and reduce long-term direct and indirect carbon emissions, including on-site combustion, grid-supplied electricity, refrigerants, and embodied carbon.

- **(REQ) – Climate Resilience Assessment:**
  To promote comprehensive assessment of observed, projected, and future natural hazards for climate resilience, aiming to enhance awareness of hazards, increase transparency of risks, reduce vulnerabilities, and ensure long-term safety and sustainability.

- **(REQ) – Human Impact Assessment:**
  To ensure that project development is guided by a thorough understanding of the social context of the local community, workforce, and supply chain, helping to address potential social inequities.

- **(1 point) – Integrative Design Process:**
  To support high-performance, cost-effective, and cross-functional project outcomes through an early analysis and planning of the interrelationships among systems. To provide a holistic framework for project teams to collaboratively address decarbonization, quality of life, and ecosystem conservation and restoration across the entire LEED rating system.

- **(1 – 6 points) – Green Leases:**
  To ensure the tenants complete the sustainable design and construction features started by the base building so that the completed space comprehensively addresses the rating system requirements.

Sustainable Sites (SS)

The **Sustainable Sites** category rewards decisions about the environment surrounding the building, with credits that emphasize the vital relationships among buildings, ecosystems, and ecosystem services. It focuses on restoring project site elements, integrating the site with local and regional ecosystems, and preserving the biodiversity that natural systems rely on.

Elevate vegetative roofing, reflective roof surfaces, and durable systems can support strategies for heat-island reduction, rainwater management, and resilient site performance over the life of the building.

Key Prerequisites & Credits:

- **(REQ) – Minimize Site Disturbance:**
  To limit site disturbance from construction activities and preserve existing native vegetation, healthy soils, and wildlife habitats.

- **(1 – 2 points) – Biodiverse Habitat:**
  To conserve existing natural areas, enhance biodiversity, restore damaged areas, and provide thriving habitats for local wildlife.

- **(1 point) – Accessible Outdoor Space:**
  To create outdoor open space that encourages interaction with the environment, social and physical activities, and passive recreation, and to incorporate elements that celebrate the community served.

- **(1 – 3 points) – Rainwater Management:**
  To reduce runoff volume and improve water quality by replicating the natural hydrology and water balance of the site, based on historical conditions and undeveloped ecosystems in the region to avoid contributing to flooding downstream in frontline communities.

- **(2 points) – Enhanced Resilient Site Design:**
  To reduce the risk of catastrophic impacts from natural and climate events on-site and in adjacent landscapes by designing, building, and maintaining sites to be more resilient to observed, projected, and future climate and natural hazards.

- **(1 – 2 points) – Heat Island Reduction:**
  To mitigate disparate impacts on microclimates and habitats caused by heat islands and extreme heat events.

- **(1 point) – Light Pollution Reduction:**
  To increase night sky access, improve nighttime visibility, and reduce the consequences of development for wildlife and people.

Water Efficiency (WE)

The **Water Efficiency** category integrates traditional efficiency measures with innovative stewardship strategies, redefining water as a valuable, limited resource. LEED v5 introduces a whole-project approach to water management, emphasizing alternative water sources, decarbonization through reduced energy use in water systems, and advanced metering for leak detection.

Vegetative roofing, roof-integrated drainage design, and long-lasting waterproofing systems from Elevate can support strategies related to stormwater management, reduced potable water use for irrigation, and protection of building systems from water-related damage.

Key Prerequisites & Credits:

- **(REQ) – Water Meeting and Reporting:**
  To conserve potable water resources, support water management, and identify opportunities for additional water savings by tracking water consumption.

  - **(REQ) – Water Meeting and Reporting:**
    To reduce potable water consumption and the associated energy consumption and carbon emissions required to treat and distribute water, and to preserve potable water resources through an efficiency-first approach.

- **(1 point) – Water Metering and Leak Detection:**
  To conserve potable water resources, support water management, limit potential material waste due to water leak damages, and identify opportunities for additional water savings by tracking water consumption.

- **(1 – 8 points) – Enhanced Water Efficiency:**
  To reduce potable water consumption and the associated energy consumption and carbon emissions required to treat and distribute water, and to reward use of alternative water sources that preserve potable water resources.
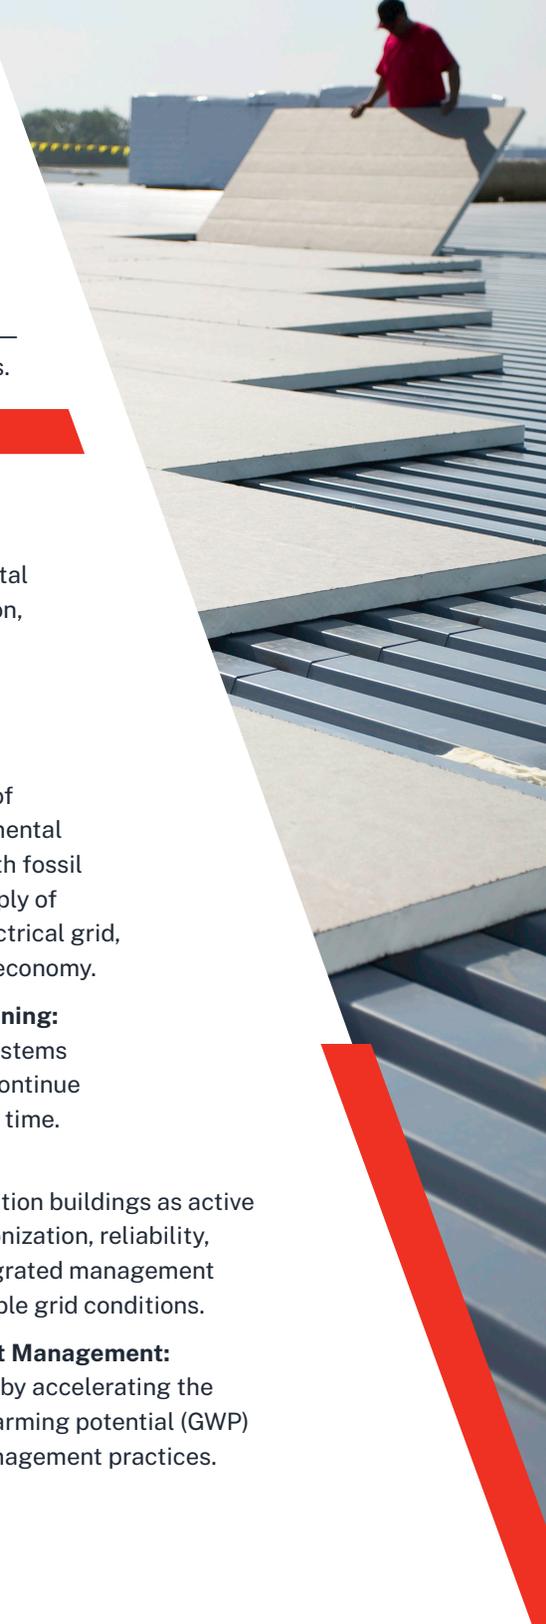

Energy and Atmosphere (EA)

The **Energy and Atmosphere** credit category in LEED v5 aims to facilitate the design and construction of low-carbon buildings by increasing carbon literacy and providing a clear framework for reducing or eliminating emissions. It focuses on three critical steps for decarbonization: electrification, reduced peak thermal loads, and energy efficiency.

High-performance Elevate roofing systems — including reflective membranes, high R-Value insulation, and airtight detailing — play a central role in reducing energy use, lowering peak loads, and supporting long-term operational carbon reduction plans.

Key Prerequisites & Credits:

- **(REQ) – Operational Carbon Projection and Decarbonization Plan:**
  To enable building stakeholders to visualize how their current design decisions will impact their project's long-term operational carbon emissions and to ensure that stakeholders are planning for low-carbon outcomes from the project's inception.

- **(REQ) – Minimum Energy Performance:**
  This credit is intended to promote resilience and reduce the environmental and economic harms of excessive energy use that disproportionately impact frontline communities by achieving a minimum level of energy efficiency for the building and its systems.

- **(REQ) – Fundamental Commissioning:**
  To improve energy performance and limit greenhouse gas emissions by verifying that systems are operating per the owner's project requirements.

- **(REQ) – Energy Metering and Reporting:**
  To support energy management practices and facilitate identification of ongoing opportunities for energy and greenhouse gas emissions savings by tracking and reporting building energy use and demand.

- **(REQ) – Fundamental Refrigerant Management:**
  To reduce greenhouse gas emissions from refrigerants by accelerating the phaseout of refrigerants with high global warming potential (GWP) and by reducing refrigerant leakage.

- **(1 – 5 points) – Electrification:**
  To encourage buildings to be designed so they do not depend on burning fuel on-site, leading to better indoor and outdoor air quality and to low carbon operations as the grid decarbonizes.

- **(1 – 5 points) – Reduce Peak Thermal Loads:**
  To minimize demand on grid resources and improve the resilience of buildings.

- **(1 – 10 points) – Enhanced Energy Efficiency:**
  To design buildings that minimize energy use to reduce the environmental damage caused by resource extraction, air pollution, and greenhouse gas emissions and to facilitate the transition to a clean energy future.

- **(1 – 5 points) – Renewable Energy:**
  To encourage and recognize the use of renewable energy to reduce environmental and economic impacts associated with fossil fuel energy use and increase the supply of new renewable energy within the electrical grid, fostering a just transition to a green economy.

- **(1 – 4 points) – Enhanced Commissioning:**
  To further ensure that the building systems function as designed, and that they continue to maintain energy performance over time.

- **(1 – 2 points) – Grid Interactive:**
  To enhance power resilience and position buildings as active partners contributing to grid decarbonization, reliability, and power affordability through integrated management of building loads in response to variable grid conditions.

- **(1 – 2 points) – Enhanced Refrigerant Management:**
  To reduce greenhouse gas emissions by accelerating the use of refrigerants with low global warming potential (GWP) and promoting better refrigerant management practices.
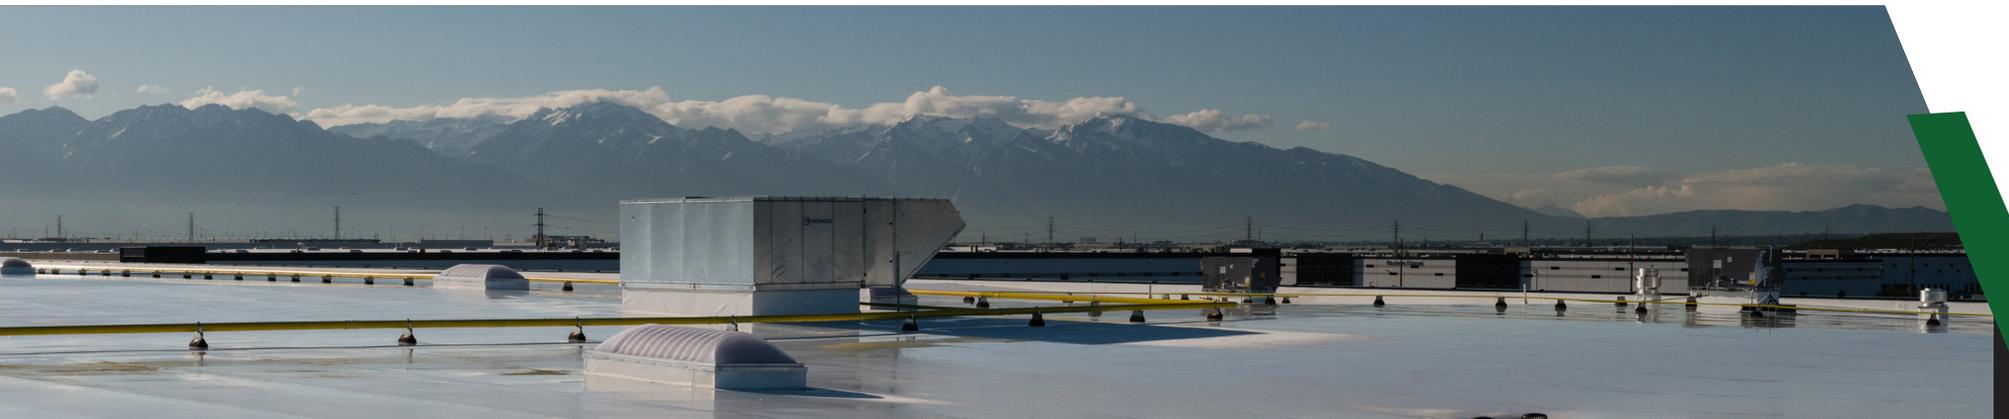

♻ Materials & Resources (MR)

The **Materials and Resources** category focuses on reducing embodied carbon, protecting health, and fostering a circular economy. It emphasizes multi-attribute product selection, supply chain decarbonization, and industry alignment.

Elevate supports MR goals through products with EPDs, durable systems that extend replacement cycles, and solutions that can contribute to strategies around embodied carbon reduction, low-emitting materials, and responsible procurement.

Key Prerequisites & Credits:

- **(REQ) – Planning for Zero Waste Operations:**
  To reduce the amount of waste that is generated by building occupants and hauled to and disposed of in landfills and incinerators through reduction, reuse, and recycling services and education, and to conserve natural resources for future generations. To set the building up for success in pursuing zero waste operations.

- **(REQ) – Quantify and Assess Embodied Carbon:**
  To quantify the embodied carbon impacts of the structure, enclosure, and hardscape of a project and assess the top sources of embodied carbon.

- **(1 – 3 points) – Building and Materials Reuse:**
  To incorporate reused materials into new building design, thereby reducing embodied carbon, keeping materials in circularity, reducing demand for virgin material sourcing, preserving resources and histories, and increasing demand for reused materials.

- **(1 – 6 points) – Reduce Embodied Carbon:**
  To track and reduce embodied carbon of major structural, enclosure, and hardscape materials from construction processes on new construction and renovation projects.

- **(1 – 2 points) – Low-Emitting Materials:**
  To reduce concentrations of chemical contaminants that can damage air quality and the environment. To protect human health and the comfort of installers and building occupants.

- **(1 – 5 points) – Building Product Selection and Procurement:**
  To encourage the use of products and materials that have sustainability information available and that have environmentally, economically, and socially preferable impacts in alignment with industry momentum. To reward project teams for selecting products from manufacturers who have disclosed sustainability information about their products and optimized their products across multiple criteria areas.

- **(1 – 2 points) – Construction and Demolition Waste Diversion:**
  To reduce construction and demolition waste disposed of in landfills and incineration facilities and pollution to the environment. To reduce the environmental impacts and embodied carbon of manufacturing new materials and products. To delay the need for new landfill facilities that are often located in frontline communities. To create green jobs and materials markets for building construction services.

Indoor Environmental Quality (EQ)

The **Indoor Environmental Quality (EQ)** credit category offers a comprehensive framework for buildings to enhance human well-being, health, and comfort. It includes practices covering air quality, thermal comfort, daylight, views, and acoustics, while also incorporating holistic design considerations such as biophilia, accessibility, and adaptability.

Elevate airtight roofing and envelope solutions, low-emitting products, and coordinated detailing help support high indoor air quality, thermal comfort, and resilient indoor environments.

Key Prerequisites & Credits:

- **(REQ) – Construction Management:**
  To promote the well-being of construction workers and building occupants by minimizing environmental quality problems associated with construction and renovation.

- **(REQ) – Fundamental Air Quality:**
  To design for above-average indoor air quality to support occupant health and well-being.

- **(REQ) – No Smoking and Vehicle Idling:**
  To minimize exposure to tobacco smoke, smoke from tobacco substitutes or cannabis, and vehicle emissions.

- **(1 point) – Enhanced Air Quality:**
  To design for increased indoor air quality (IAQ) to better protect the health of building occupants.

- **(1 – 7 points) – Occupant Experience:**
  To move beyond neutral or sufficient spaces toward human-centered design that supports customization, enjoyment, and emotional connections between people and the building, thus increasing the likelihood of consistent satisfaction and ongoing stewardship.

- **(1 point) – Accessibility and Inclusion:**
  To support the diverse needs of occupants and increase widespread usability of the building to foster an individual and collective sense of belonging.

- **(1 – 2 points) – Resilient Spaces:**
  To support design features that increase the capacity for occupants to adapt to changing climate conditions and be protected from events that may compromise the quality of the indoor environment and subsequently occupant health and well-being.

- **(1 – 2 points) – Air Quality Testing and Monitoring:**
  To support better management of indoor air quality (IAQ) and identify opportunities for health-based approaches to building operations.

Project Priorities (PR)

LEED v5's **Project Priorities** category emphasizes region-specific environmental, social, and public-health needs, encouraging innovative strategies tailored to local challenges. Formerly the "Innovation" credit in LEED v4, this category now includes Regional Priority credits to reward solutions with the highest local impact.

Key Credits:

- **Project Profiles (1–2 pts):**
  Support strategies that address regional environmental goals, social equity needs, or climate-adaptation challenges while encouraging innovation in sustainable building practices

- **LEED AP (1 pt):**
  Reward teams that include a LEED Accredited Professional to strengthen project coordination and streamline certification.

LEED® V5 Categories & Elevate Solutions

LEED v5 Category	How the Category Connects to the Roof / Envelope	Elevate Solutions that Can Help*
Integrative Process, Planning & Assessments (IP) Prerequisite	Early coordination of envelope performance, carbon, and resilience strategies.	Envelope Environmental Product Declaration (EPDs) available to estimate emissions. Enhance occupant experience with vegetative roofs.
Sustainable Sites (SS) Up to 6 points	Reduce heat island effect, support resilient sites, and manage rainwater at the roof level.	**UltraPly™ TPO, MAX PVC, EcoWhite™ EPDM (high-reflectance "cool" roofs); vegetative roofing systems**; support heat-island reduction and geomembranes support stormwater strategies.
Water Efficiency (WE) Up to 8 points	Protect building systems, support stormwater strategies, and reduce potable water use for irrigation.	**Vegetative roofing** assemblies that can reduce runoff and irrigation demand; geomembranes improve outdoor water efficiency.
Energy & Atmosphere (EA) Up to 21 points	Drive energy efficiency, reduce peak thermal loads, and support electrification-ready designs.	High R-Value **ISOGARD™ polyiso insulation; reflective UltraPly™ TPO, MAX PVC, EcoWhite™ EPDM; airtight detailing and accessories** that reduce air leakage; **SunWave™ skylights** to support daylighting and reduced lighting loads.
Materials & Resources (MR) Up to 9 points	Lower embodied carbon of the enclosure and support transparent, optimized material selection.	Roofing and insulation products with EPDs and supporting documentation; End of life recyclable materials include mechanically attached membranes and insulation and metal roofing systems.
Indoor Environmental Quality (EQ) Up to 4 points	Improve thermal comfort, air quality, and resilience of occupied spaces beneath the roof.	**Vegetative roofing assemblies** enhance occupant experience by connection them to nature within the workspace.
Project Priorities (PR) Up to 10 points	Address region-specific climate, resilience, and health priorities through envelope design.	Elevate can support the achievement of project type credits, exemplary performance credits, regional priorities, innovation strategies and pilot credit pathways.

*Final credit achievement depends on whole-building design, documentation, and USGBC review.

Elevate: A Leader In Advanced Roofing Systems

Elevate delivers high-performance commercial roofing solutions engineered for durability, efficiency, and long-term protection.

Single-Ply Roofing Systems

- **UltraPly™ TPO Roofing Systems**
- **RubberGard™ EPDM Roofing Systems**
- **MAX PVC Roofing Systems**
- **UltraPly TPO XR and MAX PVC XR Fleece-Backed Roofing Systems**

Insulation & Thermal Performance

- **ISOGARD™ Polyiso Insulation**
- **Tapered insulation systems** for drainage and long-term performance
- **Reflective membrane options** to help improve energy efficiency

Modified Bitumen & Self-Adhered SBS Systems

- **SBS Modified Bitumen Roofing Systems**
- **Self-Adhered SBS Systems**
  - Clean, efficient installation with no open flame

Resilient, High-Performance Assemblies

- **FM-approved roofing assemblies** designed for high-wind performance
- **Engineered system solutions** that support demanding applications like re-roofs and critical facilities

Specialty & Sustainable Solutions

- **Vegetative roofing system solutions**
- **Daylighting integration availability**

Complete System Approach

- Membranes + insulation + accessories -built to work together as a **fully integrated Elevate roofing system**

Elevate Products That Support LEED® v5 Strategies

From thermal performance to material transparency, Elevate delivers the systems that help project teams design smarter, lower-carbon, and LEED-aligned buildings. The following products may contribute to strategies across key LEED v5 categories. LEED points may be achievable for certain products only when specific project conditions, applications, or documentation requirements are met.

This document is provided for informational and promotional purposes only. It is intended to highlight potential ways in which the products and solutions offered by Amrize may contribute to sustainability objectives and certain credits within the LEED v5 framework.

The information contained herein is not intended to serve as an authoritative interpretation of LEED requirements and should not be relied upon as the sole basis for project design, certification strategy, or compliance determinations.

References to potential LEED credits, sustainability attributes, environmental benefits, or eligibility for incentives or tax credits are illustrative in nature and may vary based on project design, product selection, installation conditions, jurisdictional requirements, and evolving regulatory or certification criteria. Amrize makes no representations or warranties regarding the achievement of LEED certification, the attainment of specific credits, or eligibility for any governmental incentives or tax benefit.
